

Q4.1a Case Study 2 - Supporting Digitally Excluded Older Patients

High Med Ltd + Dr Singh Hammond Road consortium | Lot 4 Sudbury Surgery (E84685) | Atamis C444743

Why this group is a priority (local need)

Brent's 75+ population is projected to grow 71% by 2041. Many older patients face digital exclusion, risking poorer access as services digitise.

Potential barriers to access

- Limited digital skills, devices or connectivity.
- Sensory, cognitive or mobility impairments.
- Social isolation and low confidence navigating services.

Specific measures to address barriers

- Preserved telephone and walk-in routes alongside digital channels.
- Assisted digital support and carer involvement; accessible information.
- Proactive telephone recall and home visits for housebound patients.
- Social prescribing to tackle isolation; partnership with Age UK and voluntary sector.

How effectiveness would be evaluated

Measure	Baseline	Target (12-18 months)
Non-digital access maintained when needed	100%	100%
75+ care plans and reviews completed	Establish	>=90%
Older-patient experience (FFT/survey)	Establish	Improving

No patient-identifiable information is used; this is an illustrative model.
