

Q4.4a Illustrative Example - Wembley Diabetes Prevention & Control Programme

High Med Ltd + Dr Singh Hammond Road consortium | Lot 4 Sudbury Surgery (E84685) | Atamis C444743

Proposed model

A flagship programme for Sudbury's highest-risk communities, applying the PHM method to Brent's elevated diabetes burden. Illustrative only; no patient-identifiable data.

How the approach is applied

- Identify: dashboard finds patients with diabetes and those at high risk (NDH/pre-diabetes), prioritising the most deprived and South Asian cohorts.
- Engage: bilingual outreach with Brent Health Matters, faith and community venues; referral to the NHS Diabetes Prevention Programme.
- Intervene: structured reviews, pharmacist-led SMRs, culturally tailored lifestyle and dietary support, retinal/foot screening recall.
- Coordinate: PCN clinical pharmacist, community dietetics and social prescribing.

Outcomes and evaluation

Measure	Baseline	12 months	18 months
NDH patients referred to NDPP	Establish	Increasing	Sustained
Diabetes 3 treatment targets	Establish	Improving	At/above benchmark
Screening uptake (retinal/foot)	Establish	Improving	At/above benchmark
Equity gap (most vs least deprived)	Measure	Narrowing	Reduced

System fit

Aligns with Core20PLUS5, the ICS population-health strategy and Brent neighbourhood priorities; governed through the practice PHM review and PCN.
